# BRAKE KIT

## Convert to Electric!

The Harlan electric park brake conversion kit eliminates the need for constant adjustment of the park brake cable and continual replacement of the handle and cables. No more frozen cables in the winter that don't release your brake.

This is a push button activated brake that beeps when the required force is met to set the brake. As an added safety feature, if the driver forgets to set the park brake, the brake will automatically set when the vehicle is turned off. The push button brake also avoids accidental abuse of using a lever park brake to stop a vehicle.

Push Button Control

12V control Box sets brake by measured force

Automatically adjusts to same force each time

Replaces hand brake and cable
